

BlogTalkRadio

The world's first social radio network

BlogTalkRadio allows anyone, anywhere the ability to host a live, Internet Talk Radio show, simply by using a telephone and a computer.

BlogTalkRadio's unique technology and seamless integration with leading social networks such as Facebook, Twitter, and Ning, empowers citizen broadcasters to create and share their original content, their voices and opinions in a public worldwide forum. The network hosts and preserves millions of conversations and brings together like-minded individuals into diverse online communities.

Many businesses also utilize the platform as a tool to extend their brands and join the conversation on the social web. Notable corporate clients include Sears, SAP, Intel, Ford Motor Company, PepsiCo, Allstate Insurance, U.S. Department of Defense, and HarperCollins.

The idea for **BlogTalkRadio** came out of a desire to share stories interactively.

In 2006, Alan Levy, BlogTalkRadio's co-founder and CEO, set-up a blog (www.theinspirationalvisit.blogspot.com) to update his family and friends about the condition of his father, Maurice Levy, who was battling Non-Hodgkins Lymphoma. It later became a memorial to his life. Levy felt the power of blogging, and believed that by combining blogging and telecommunications, an interactive online platform for two-way conversations could be established. With a background in telecommunications, Levy came up with the idea of an Internet radio network that was accessible to anyone, as a host or a listener, with a phone. And thus, BlogTalkRadio was born.

Today, BlogTalkRadio is the **largest enabler of user-generated audio content on the Internet**. A truly democratized medium, BlogTalkRadio has tens of thousands of hosts and millions of listeners tuning in and joining the conversation each month.

From Static Solution to Interactive Conversation

A powerful social media platform

Blending elements of traditional telephony, blogging, broadcast talk radio, streaming audio/video, Internet chat and podcasting, and featuring a broad syndication network, the highly-scalable BlogTalkRadio platform makes it easy for individuals and corporate users to publish, consume and share content.

Make it Simple for Your Community to Create, Publish, Consume, and Share

CREATE

Dial or login to start your show
Listeners dial in or logon to participate

PUBLISH & CONSUME

You control production of your show
Listeners visit to listen live and interact

SHARE

Shows are widely syndicated, shared and archived for future listening

Proprietary BlogTalkRadio Technology Platform

Turn-key audio broadcasting solution | Live, two-way conversations | SEO optimized
Live streaming and archived podcasts | Robust browser-based switchboard
